

Indoor Outdoor Bench

This Cedar bench was originally installed on display in downtown Victoria.

At over twenty feet long it is stunning in an urban setting but would be ideal for any public space such as a park, garden or even inside in a foyer or atrium. It is designed to be easily secured on different surfaces and is finished with two coats of a premium exterior finish.

FSC certified clear Western Red Cedar is used throughout. The nearly two inch thick cedar pieces contrast beautifully with the bent rebar.

The teak stain used on the cedar has been applied to the rebar to create a more sophisticated look but some rust has intentionally been left.

This bench is now installed in the Resort Municipality of Whistler.
