

Infinity Bench

This gorgeous 15' bench snakes through its environment. It is made from clear western red cedar and finished to highlight the grain of the wood.

Installed on rebar in gravel in a steel form this industrial look is softened by the curves and the softness of the wood. The steel is early rusting which will add to the look over time.

Each 7.5' module is joined together and is designed to incorporate a unique environment. This bench represented here is comprised of two modules but the design could easily incorporate three or more.

The thickness of the wood and the parchment finish add to the unique look.

The bench pictured is \$2600.00. The cost of the installation in this case would be \$900.00 which includes labour, gravel and the steel form. This bench can be customized to any radius and the price will vary accordingly. The price will also vary with different sites and installation methods.
